

Improve the experience between the patient and caregiver with CareTech RTLS - the proven Real-Time Location System for Healthcare.

HOW DOES IT WORK?

- 1 Get CareTech RTLS installed at your facility.
- 2 Integrate with new CareTech IP Call Points OR retrofit into existing CareTech serial systems.
- 3 Enable communication of data for staff, patients and medical equipment for duress, movement and location in healthcare environments.
- 4 Staff and Patients/Residents move freely about the facility, their locations collected as they move.

► Built to help cut costs and save lives.

**Ideal for Healthcare Environments**

Designed and manufactured specifically to conform with aged care and hospital environments

**Flexible Installation and Integration**

Designed to work with the new CareTech IP call points but can also be retrofitted into existing CareTech serial systems

**Data for Duress and Movement**

Communicates data for both staff and patient locations for duress and movement throughout the facility

**Ease of Staff Movement**

CareTech RTLS collects staff locations as they move freely around the facility without needing new infrastructure as it is embedded within the Nurse Call System

**Immediate or Real-Time Tracking**

Designed to work with the new CareTech IP call points but it can also be retrofitted into existing CareTech serial systems to monitor staff, patients and medical equipment

**Automatic Presence Event**

As staff move into a room, CareTech RTLS activates an automatic presence event, enabling staff to concentrate efforts on patients and residents

**Instant Location Information**

If the duress button is pressed, an ID and location is immediately sent to nurse display, mobile and cordless phones.

**Integration and Reporting**

With the CareTech and the LAS software system, users can:

- create and email reports on the fly or scheduled intervals
- complete site by site comparisons
- breakdown time of care given in rooms or work areas
- report based on duress events for both residents/patients and staff
- interface with other assets

**Reduce Costs of Healthcare Location Tracking**

As CareTech RTLS is integrated in CareTech IP Nurse Call Systems as standard, infrastructure costs to implement RTLS are effectively zero.
